Home\$ense Energy Audit

City Utilities residential customers are eligible to have an on-site energy audit completed on their home. This service is performed by a certified energy auditor who will find where energy in your home is being wasted – and identify how to make your home more energy-efficient.

HomeSense Energy Audit

City Utilities residential customers are eligible to have an on-site energy audit completed on their home. The service is performed by a certified energy auditor who will find where energy in your home is being wasted and identify how to make your home more energy-efficient. After the audit has been completed, you will be provided with a report that outlines cost-effective ways to reduce energy and water usage, specific to your home.

During this audit, a blower door test will be performed to pinpoint air leaks in the building envelope, as well as evaluate the performance of the ductwork. We will also evaluate the insulation levels in your home and check the efficiency of your heating and cooling system.

The HomeSense Energy Audit service, normally \$350, only costs City Utilities customers \$175 for homes 4,000 sq ft and under. The cost can be divided into four convenient installments on your utility bill.

For larger homes, an additional charge of \$50 per each 1,000 sq ft over 4,000 sq ft will be required due to the additional on-site work and reporting.

Each participant also receives an Efficiency Kit with over \$40 of energy and water efficiency items:

- 3 compact fluorescent lights
- A water heater insulation blanket
- A kitchen faucet aerator
- A low-flow showerhead
- A package of outlet & switch plate insulation gaskets

What do you get for \$175?

- ✓ A diagnostic evaluation of your home's energy and water efficiency.
- ✓ A detailed report outlining cost-effective measures specifically for your home.
- ✓ Over \$40 in energy and water efficiency products.

Additional Services

Infrared imaging services are available, but are not necessary to identify the cost-effective measures needed in every home. The infrared imaging may be used when a homeowner needs a more thorough investigation of possible thermal defects or air infiltration in their home. A one time blower door re-test is also available to customers who have completed the recommended improvements, and would like verification of proper installation. These services are available at an additional charge:

- Infrared Camera Imaging - On-site viewing of pictures \$95
- Infrared Camera Imaging - Detailed report with pictures \$250
- Blower Door Re-test \$50

(All charges will be added to your City Utilities account.)
