Metering at Different Voltages

City Utilities may, at its option, install metering equipment on the primary side of the transformer for a secondary voltage customer. In this case, the customer shall be allowed a one (1) percent discount for all the above charges and the Secondary Service Demand Charge for Distribution will apply.

Billing Demand

The billing demand shall be ninety (90) percent of the highest actual kilowatt demand occurring in the most current billing months of July, August, or September. Initially, until a summer-month kilowatt demand occurs, the billing demand shall be ninety (90) percent of the highest actual kilowatt demand measured.

Customers served under this Electric Rate shall have the option of having their billing demand based on measured demand occurring only during peak periods as defined in the General Terms and Conditions Governing Electric Service. To qualify for this option, customers must have installed an electric meter which will measure demand by time-of-use and for which they shall pay a one-time charge equivalent to the additional cost of the meter.

Outside City Charge

All charges shall be five (5) percent more per service outside the corporate limits of the City of Springfield, Missouri.
